Request production status

Production status removes the limits on the number of Dropbox users or teams your app can link.

You may apply for production status at anytime, but your application **will not be reviewed** until your app has at least **50 Dropbox users** (legacy Business API apps are not subject to this requirement). While your app has development status, it can link up to **500 Dropbox users** or **5 Dropbox teams**, so in most cases, it's safe to release your app to the world before it's been granted production status.

Once your app links 50 users, you must apply for production **within two weeks**. If your app has not been granted production status at the end of two weeks, it won't be able to link any more users.

If, however, you feel there is a compelling reason why your app should be reviewed before it reaches the 50 user requirement (for example, if you believe it is likely that your app will grow from 50 to over 500 users in a very short amount of time), you may request an early review when submitting your application. Please be very clear about why your app needs an early review in the **Request early review field**, below.

For more information, please review the [developer guide](#). Please also ensure that your app follows Dropbox's [branding guidelines](#) to help expedite the approval process.

Confirmation	**Does your app need production status?**
	The only difference between production status and development status is that production status sets no limit o the number of Dropbox users or teams that can link with your app.
	Apps that do not need to link with more than than 50 Dropbox users **should not apply for production status.**
	☐ My app will need to link with more than 50 Dropbox users
Description	**What does your app do?**
	(Required)
Dropbox integration	**How does your app use the Dropbox API?**
	(Required)
Website	**What is your app's website?**
Privacy Policy Link	**What is your app's privacy policy link?**
	(Required)
Platform(s)	☐ Android ☐ iOS ☐ OS X ☐ Web

☐ Windows
☐ Other

Testing instructions	**How can we try your app's Dropbox integration?**

(Required) Please provided detailed step-by-step instructions for testing your app. If our testing account is unable to connect to your app, we won't be able to approve it for production.

Test account credentials	**Does your app require an account (other than for Dropbox)?**

Third-party test username/email address.

Third-party test password.

☐ My app doesn't require the user to have a non-Dropbox account to use the app.

Testing conditions	**Please ensure at least ONE of the following conditions is true:**

☐ My app can be downloaded and tested **free of charge** by an **external party**

☐ I have provided either **test account** login info or a link to a **test build** or a link to **screenshots or a screencast** detailing my app's integration with Dropbox

Request early review	**Think we should look at your application ahead of time?**

(Optional) Only fill this in if there is a compelling reason why your app should be reviewed before it links 50 Dropbox users.
